

KEVIN EKA PRATAMA

BACKEND & CLOUD SYSTEMS ENGINEER

Distributed Microservices • High-Concurrency Go & Java Spring Boot • ACID Ledgers

✉ kevinekapratama@gmail.com • ☎ +62 (813) 2661-2344 • 🌐 mazkev.vercel.app • 🏠 github.com/mazkev • 📍 Jakarta, Indonesia

EXECUTIVE SUMMARY

PROFESSIONAL ENGINEERING PROFILE

Backend & Cloud Systems Engineer with 2+ years of enterprise Application Support experience at PT PLN Icon+. Proven track record maintaining 100% SLA compliance for production operational tickets, authoring structured SQL queries (PostgreSQL, Oracle, MySQL) for transaction verification and data reporting, and monitoring high-availability system workflows 24/7. Independently architected and deployed 19 production-grade backend microservices and cloud systems using Go (Golang), Java Spring Boot 3.3, Bun/Hono, and Express.js. Strong practical mastery in Clean Architecture (DDD), ACID transactional ledgers with row-level locks, Redis cache-aside patterns, RabbitMQ message brokers, gRPC binary protocols, and Docker containerization.

PROFESSIONAL EXPERIENCE

PRODUCTION SYSTEMS & OPEN SOURCE

Application Support Engineer • PT PLN Icon+

2023 - Present

- Investigated and resolved technical operational tickets with a **100% SLA compliance rate**, ensuring timely resolution of customer transaction issues.
- Authored and executed complex SQL queries across **PostgreSQL, Oracle, and MySQL** for operational data validation, transaction auditing, and business reporting.
- Monitored nationwide enterprise system workflows 24/7, analyzed application error logs (HTTP 5xx/4xx), and coordinated directly with core developers for bug/API fixes.

Backend Systems & Architecture Research • Independent Engineering & Open Source Projects

2023 - Present

- Architected, built, and audited **19 production-grade backend microservices** with Clean Architecture and Docker containerization.
- Designed **ACID transactional schemas**, implemented JWT/RBAC security pipelines, Redis cache-aside patterns, and RabbitMQ brokers.
- Maintained strict engineering standards: unit testing, Swagger/OpenAPI documentation, and high-availability operations.

TECHNICAL COMPETENCIES & CORE STACK

BACKEND & CLOUD SYSTEMS ENGINEER

Backend Languages: Go (Golang 1.25/1.26), Java (JDK 17/21), TypeScript, JavaScript (Node.js/Bun), Python 3, SQL, Bash

Frameworks & Architecture: Java Spring Boot 3.3 (Spring Security 6, JPA), Go (Gin/Fiber/Echo), Bun + Hono, Express.js, FastAPI, Clean Architecture (DDD), gRPC (Protobuf), RESTful APIs, Microservices

Databases & Message Brokers: PostgreSQL (GORM, Prisma, ACID Transactions, Connection Pooling, Row-level Locks), MySQL, MongoDB (NoSQL), Redis (Cache-Aside, Rate Limiting), RabbitMQ (Message Broker)

DevOps, Cloud & Tooling: Docker, Docker Compose, Linux Bash, Git & GitHub, Postman, Swagger / OpenAPI 3.0, CI/CD GitHub Actions

EDUCATION

ACCREDITED DEGREE

Bachelor of Computer Science / Information Technology (S.Kom) • Universitas AMIKOM • GPA: 3.42 / 4.00 (Thesis Defense: Dec

2017 -
2023

2022 | Official Degree / Graduation: 2023)

19 Repos

BACKEND REPOSITORIES

8 Microservices

GO (GOLANG) SERVICES

4 Services

JAVA SPRING BOOT

7 Services

NODE.JS / BUN / PYTHON

CORE FINANCIAL & HIGH-THROUGHPUT MICROSERVICES

Go & Java Ecosystem

- go-banking-core-system: Atomic account transfer engine with ACID transaction isolation, PostgreSQL row-level locks, Bcrypt PIN, and Swagger docs.
- go-distributed-microservices-lab: Distributed services communicating over binary gRPC, asynchronous RabbitMQ event bus, and Redis cache-aside.
- nexus-workspace-engine: Java Spring Boot 3.3 enterprise microservices ecosystem with Resilience4j circuit breakers and Eureka discovery.
- go-clean-arch: Domain-Driven Design (DDD) Clean Architecture boilerplate decoupling Domain, Usecase, and Repository layers.

API GATEWAYS, MESSAGING & DATABASE ENGINES

Ultra-Low Latency Stacks

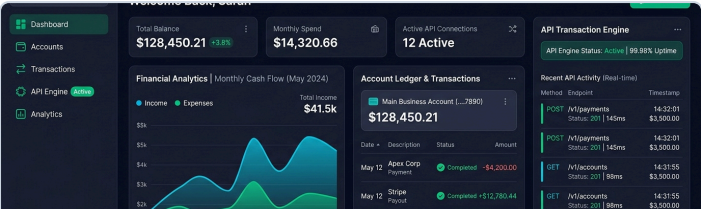

- go-ecommerce-gateway-engine: Reverse proxy API gateway with rate limiting, GORM PostgreSQL connection pooling, and JWT authorization.
- bun-hono-ecommerce-api: Sub-millisecond REST API engine running on Bun runtime with Hono v4 framework and MongoDB NoSQL storage.
- fastapi-task-queue-redis: Asynchronous Python background task processing engine using Celery, Redis broker, and FastAPI REST endpoints.
- express-multitenant-saas: Multitenant backend architecture with schema-isolated database routing and scoped JWT security.

PRODUCTION ENGINEERING PATTERNS & ARCHITECTURAL STANDARDS

Enterprise Compliance

- ACID Transactional Ledgers**: Strict row-level locking preventing race conditions and double-spending across financial workflows.
- Cache-Aside & Throttling**: Redis cache-aside pattern reducing read latency by >85% and distributed token bucket rate limiters.
- Asynchronous Event Broker**: RabbitMQ exchange/queue bindings ensuring at-least-once message delivery and decoupled microservices.

Directory Audit Note: Full source code, commit history, and test suites for all repositories are publicly available at github.com/mazkev and interactive web workstation at mazkev.vercel.app.

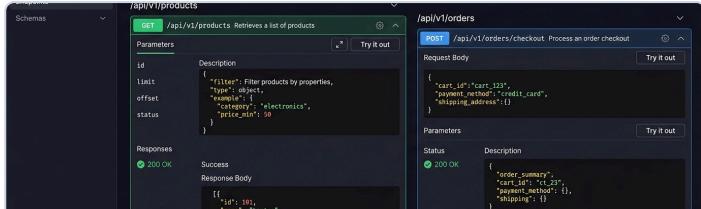

1. GoFinance Banking Core API

BACKEND

Go • Echo • PostgreSQL • Redis • RabbitMQ • Docker

High-concurrency banking engine with ACID transactional account transfers, Redis cache-aside ledger, and RabbitMQ broker.

github.com/mazkev/go-banking-core-system

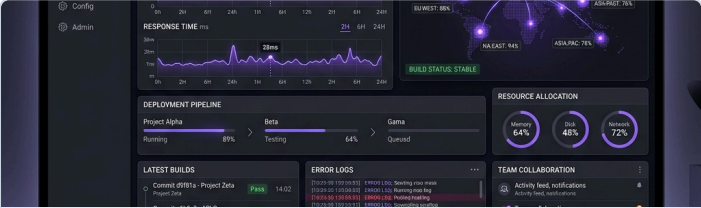

2. Swagger Go API Gateway Engine

BACKEND

Go 1.26 • Gin • GORM • PostgreSQL • Swagger OpenAPI 3.0

Production API gateway with interactive Swagger OpenAPI contract documentation, connection pooling, and JWT authorization.

github.com/mazkev/go-ecommerce-gateway-engine

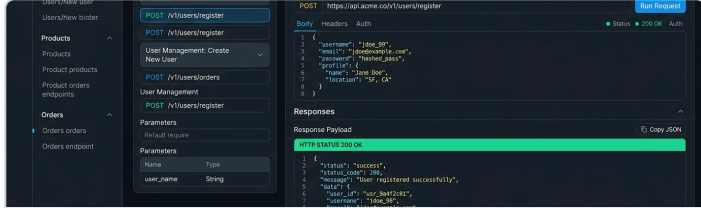

3. Nexus Enterprise Microservices

BACKEND

Java Spring Boot 3.3 • Resilience4j • Eureka • PostgreSQL

Enterprise backend architecture with Eureka service discovery, circuit-breaker failover protection, and JPA auditing.

github.com/mazkev/nexus-workspace-engine

4. Go Clean Architecture Engine

BACKEND

Go • Gin • Clean Architecture • Docker • Unit Tests

Modular domain-driven design decoupling business logic, usecases, and repository data stores for maximum testability.

github.com/mazkev/go-clean-arch

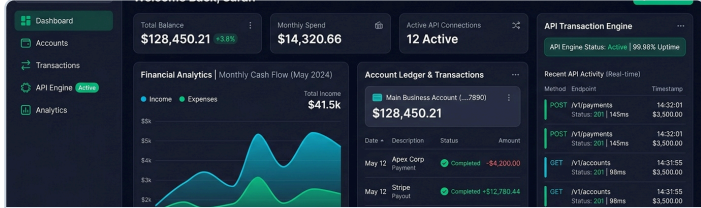

5. Core Banking Swagger Documentation

BACKEND

Go • Echo • Swagger UI • Bcrypt PIN • Audit Logs

Interactive API testing suite verifying balance inquiries, atomic debit/credit transactions, and audit ledger entries.

github.com/mazkev/go-banking-core-system

6. Distributed Microservices Concurrency Lab

BACKEND

Go • gRPC • Protocol Buffers • RabbitMQ • Redis

Binary inter-service communication pipeline with worker pool concurrency and decoupled background message queues.

github.com/mazkev/go-distributed-microservices-lab

Interactive Demonstration & Source Code Audit: Live deployments, interactive case studies, architectural documentation, and full source code are accessible at mazkev.vercel.app and github.com/mazkev.
